

# QUICK START GUIDE

Find all the information related to your product in its user manual

## #1 IN&BOX BASICS

In&box: In&motion airbag system detection and triggering device containing the sensors and battery.

## #2 CHARGE THE IN&BOX

Use the USB cable included in your package, with a USB charger (not provided).

**Warning:** Be sure to check the direction of the micro USB and do not use force to insert the cable.

## #3 GETTING STARTED

Push the switch button ON

If the switch button is already ON, **quickly press twice** on the central button.

**Trick:** The In&box has an automatic standby mode. The In&box will switch to standby mode automatically if it remains motionless for more than 5 minutes. When the In&box detects motion, it turns on automatically eliminating the need to turn it on or off!

## #4 INSTALLATION ON YOUR PROTECTION EQUIPMENT (only if you don't use the airbag)

To fix the In&box to your protection, we recommend to use adhesive fasteners (Velcro type), and to fix it by following the drawing against

**!** The label with the QR code has to remain visible.

The In&box has to be :

- centred on the spine,
- LEDs to the top,
- face to you while fixing it

Positioning direction

Repeat the adhesive fasteners drawing on your protection. Be sure that the surface is clean before sticking the adhesive fasteners.

Each protection being different, complete the setting by using a "security" attachment like : Chaterton tape, rubber band, etc., to not lose the In&box.

**!** The In&box isn't waterproof, take care not expose it to water too much while wearing it.

To ensure the Velcro life, we recommend to recharge the In&box while being attached to the protection vest.
